RE: Dry film weight of Enduris 3502

Three applied thickness are used to provide 10, 15, 20 year warranty periods for the Enduris 3502 silicone roof coating.

Warranty Period	Gallons per 100 SQ/FT	Wet Mil	Dry Mil	Dry Film Weight per Foot
10 years	1.5	24	21	0.1462
15 years	2.0	32	28	0.1950
20 years	2.5	40	35	0.2436

Actual coating weight and usage of product to achieve minimum thickness for warranty may vary based on application method and substrate irregularities. The use of this data is suitable for theoretical purposes. Performing of a small scale mockup at time of setting up adhesion testing can help to identify actual usage of material on project specific substrates.

Thank you,

Kevin M Dunn
